EDUCATION

The University of Texas at Austin

Master of Science in Data Science

Expected Graduation: May 2028

Austin, Texas

Texas Tech University

Bachelor of Science in Computer Science, Minor in Mathematics, GPA: 3.7

Graduated: May 2026

Lubbock, Texas

WORK EXPERIENCE

Data Engineer Intern

May 2026 – August 2026

PACCAR – Peterbilt Motors Company

Denton, Texas

- Developed a full-stack Flask application for MLO automation, projected to save PACCAR \$100K annually by reducing vehicle-data lookup time from 20 minutes to near-instant results.
- Architected the application using Python, SQL, and Snowflake for backend data retrieval and processing, with a frontend built using HTML, CSS, and JavaScript for user input and results display.
- Containerized and deployed the application using Docker, AWS Lambda, Amazon ECR, and API Gateway, leveraging Terraform to provision all serverless components, IAM roles, and secure access policies.
- Implemented AWS CloudWatch and Amazon S3 for centralized application logging while collaborating with data scientists and product managers within an Agile/Scrum framework.

Data Analyst

January 2025 – Present

NemaLife Inc.

Lubbock, Texas

- Contributed to NASA space biology research, analyzing live *C. elegans* video datasets to track organism behavior and microfluidic chip responses to spaceflight stressors.
- Curated and validated high-volume computer vision datasets against live video data, significantly improving data quality and label accuracy for AI model training.
- Engineered ETL pipelines using Python to extract experimental data from Excel and JSON files, transform it, and load standardized datasets into a centralized SQL database.
- Designed Power BI dashboards to visualize complex biological metrics and experimental results, streamlining data delivery and reporting for key research stakeholders.

Data Science Intern

May 2025 – August 2025

AthletIQ

Lubbock, Texas

- Built a Python preprocessing pipeline to ingest, clean, and validate raw computer vision data, transforming unstructured basketball spatial data into production-ready datasets.
- Developed core engineering logic to compute advanced performance metrics, including spatial heatmaps, court zone efficiency, shot distances, and shooting percentages.
- Collaborated directly with the CEO to translate product requirements into technical solutions.

PROJECTS

AI Contract Analysis Platform | [GitHub Repository](#)

Technologies: Python, Flask, JavaScript, HTML, CSS, OpenAI API, Sentence Transformers, FAISS, REST APIs, JSON

- Engineered a full-stack AI contract analysis platform that parses PDF, DOCX, and TXT files into searchable legal-text chunks.
- Built a retrieval-augmented generation (RAG) pipeline using Sentence Transformers, FAISS, and OpenAI to generate grounded contract answers.
- Developed REST APIs and a red-flag engine to identify risky clauses, classify severity, and display explanations through a Flask and JavaScript interface.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, C, Bash, HTML, CSS

Cloud & Infrastructure: AWS Lambda, Amazon ECR, Amazon S3, API Gateway, CloudWatch, Docker, Terraform

Data Platforms & Analytics: Snowflake, Power BI, Tableau, Excel, PowerPoint

Development Tools: Git, GitHub, Jira, Agile/Scrum

LEADERSHIP & INVOLVEMENT

Kappa Sigma Fraternity

Philanthropy Chairman

- Directed 100+ members in organizing fundraising events, strengthening partnerships, and contributing funds to community-based initiatives.
